We specialize in the production of industrial seals using moulding, injection and Seal-Jet processing.

Our experienced and qualified team is always ready to help our partners choose the right seal and the material from which it will be made.

Thanks to our CNC machining technology we are able to produce quickly custom sealing solutions from various materials and types provided by the customer. We specialize in manufacturing seals with large diameters (up to 1200 mm).

We produce rubber components using moulds both provided by the customer and made individually on request.

We make vulcanization moulds on site in our plant, which is why we can significantly shorten order processing time and deliver custom orders.

Our seals are manufactured with injection moulding machines that enable the production of large quantities in a short time.

We have a large machinery park, so we are able to produce over 90% of our products on site and guarantee continuity of deliveries.

Our customers include both small domestic enterprises, medium-sized companies and market giants such as Lotos, Orlen or Phillip Morris. We operate in Poland and abroad, delivering our solutions to contractors in Germany, Austria, UAE and other countries.

Our products are used in all sectors of the economy, especially in the engineering, chemical, cosmetic, sanitary, electrical, automotive, aviation, shipbuilding, paper, food, medical and mining industries.

As a result of the dynamic development and the introduction of modern manufacturing technology we are one step ahead of the competition and hence we are able to provide:

- short lead time – up to 24 hours
- custom seals
- seals made from the provided moulds
- technical guidance
- high quality products at competitive prices

We constantly increase the quality of our products and the service level, which is reflected in the implemented quality system according to the ISO 9001 standard.

CUSTOMER
SERVICE

We offer a wide range of products and services:

- Industrial seals
- O-rings
- Simmerings
- Wiper rings
- Compact seals
- Mould seals
- PU rollers
- Injection products
- V-belts
- NBR, FPM, VMQ, EPDM, HNBR cords
- Plastic products
- Guide bands
- Rubber plates
- Sealing plates
- Extruded profiles
- Rubber-fabric seals
- Flat seals
- Metal products
- Bonds
